EDUCATION

Willamette University

Salem, OR

Master of Science in Data Science

Sep. 2025 – Aug. 2026

– Relevant Coursework: Machine Learning, Time Series Analysis, Statistical Inference, Data Mining, Database Systems

Eastern Washington University | Former Student-Athlete

Cheney, WA

Bachelor of Science in Business Administration, Management

Sep. 2023 – Jun. 2025

– Relevant Coursework: Business Statistics, Financial Accounting, Business Analytics, Operations Management

EXPERIENCE

FP&A Analyst Intern

Jun. 2026 – Aug. 2026

Tektronix

Beaverton, OR

- Completed an Ad Hoc analysis on a 120,000-row dataset, distilling complex findings into a concise, professional one-page summary presented to CFO-level leadership to support strategic decision-making.
- Analyzed reserve data to identify three key drivers of variance, presenting findings alongside three actionable recommendations—including one option projected to reduce reserves by \$1M—to support leadership decision-making.

PROJECTS

Where Next? Predicting the Next Unaffordable U.S. City | Python, R, GitHub

In Progress

- Built a metro-level five federal and private datasets (Zillow, FHFA, Census ACS, Population Estimates) via CBSA codes, applying data quality and validation checks to ensure a reliable analytical foundation.
- Engineered four predictive features — price-to-income trends, affordability momentum, housing supply pressure, and population velocity — from multi-year panel data to produce quantifiable risk signals across U.S. metro markets.
- Trained XGBoost/LightGBM models with SHAP explainability on historically unaffordable cities (Tampa, Austin, Boise), building a ranked risk index and communicating findings through clear visual summaries.

Housing Market Dynamics | R, tidyverse, ggplot2

Dec. 2025

- Combined housing price indices for 18 metro areas with delinquency data across 275+ observations (10-year panel) to identify city-level risk patterns and quantify regional market vulnerability.
- Built and validated regression and non-parametric models to test trend reliability, translating statistical findings into actionable insights for non-technical stakeholders.
- Documented analytical methodology and model assumptions in a 20-page R Markdown report, ensuring reproducibility and a clear audit trail consistent with data governance best practices.

Spokane County EMS Analysis | Excel, Power Query

Dec. 2024

- Analyzed 1,534 operational records to surface demand patterns across 4 service zones, partnering with stakeholders to produce reporting that directly informed resource allocation.
- Built 12+ pivot tables and 10+ charts to track response times and unit utilization, reducing reporting time from ~2 hours to ~30 minutes via a reusable, validated Excel workbook.

TECHNICAL & PROFESSIONAL SKILLS

Languages: Python, R, SQL

Data Analysis: statistics, hypothesis testing, regression, ANOVA, non-parametric tests, econometric modeling, forecasting, machine learning (classification, clustering), SHAP explainability, data validation & quality checks

Tools: Excel (XLOOKUP, Pivot Tables, Power Query), Python (pandas, plotly, scikit-learn, XGBoost, LightGBM), Quarto, RStudio, GitHub, Minitab, Streamlit, R Shiny

Visualization & Reporting: ggplot2, Plotly, Excel dashboards, interactive HTML/R Markdown reports, executive-ready summaries

Collaboration: cross-functional stakeholder communication, translating business questions into data-driven analysis

CERTIFICATIONS & ACHIEVEMENTS

X-Culture Global Business Certificate

Dec. 2024

- Led an international team of 6 across 4 countries, collaborating cross-functionally and earning a 4.65 / 5.0 peer evaluation for performance and teamwork.
